QPST RF NV Item Manager

The **RF NV Item Manager** tool is being deprecated as of July 2008.

Limitations of QPST NV Manager

- **RF NV Item Manager** is not able to load QCN files that are created with **QPST 2.7 build 310** and later.
- The **RF NV Item Manager** shortcut in the QPST **Start Menu** folder will be disabled.
- **RF NV Item Manager** executable can be found in `C:\Program Files\Qualcomm\QPST\bin\RF_NV_Manager.exe`

## *Replacement tools*

The replacement tools are:
- **QXDM NV Browser**, for individual NV read/write operations
- **QRCT NV Tool**, for multi-item NV read/write operations

QXDM NV Browser

QXDM is a QCT software tool that is available from http://support.cdmatech.com

This tool allows users to change one NV item at a time.

In QXDM, the NV Browser window can be found under the menu **View -> Common -> NV Browser**, as shown in the following diagram.
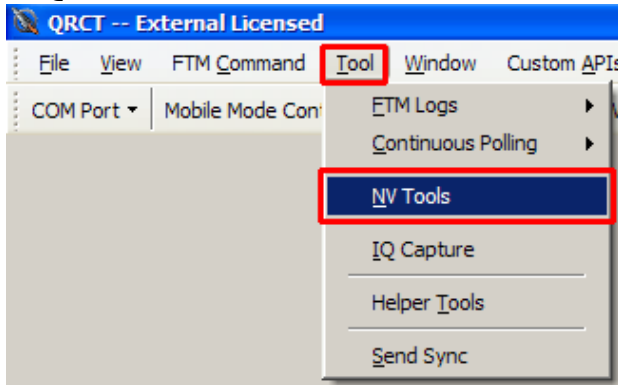

QRCT NV Tool

QRCT is included in the QDART software tool that is available from
http://support.cdmatech.com

This tool allows users to manage QCN and XML NV Source files, but it does not directly allow reading/writing/editing of individual NV items. Instead NV items must be edited in an XML file with a text editor.

In **QRCT** the **NV Tools** screen can be found under **Tool -> NV Tools**.

Help for the **NV Tools** screen can be found in the QDART Help file under **QRCT -> Using Phone Tools -> NV Tools**.
