How to ROOT!!!!!!!!!!
Prerequisites: ADB, Brain, ZTE ZMAX PRO, USB cable, ADB debugging enabled on phone

1) Make sure you have ROOT.zip and QPST.zip. They should be in the same directory as this pdf.
2) Start by extracting both files to their own folders
3) Connect your phone to a USB 2.0 port on the back of your pc
4) Open a command prompt and type in without quotes: "adb devices"
5) On your phone, a message should pop up saying if you trust this pc. Click yes.
6) Now in command prompt type in: "adb reboot edl"
7) Now go to the Downloaded files and extract both zip files
8) Go to the QPST folder and go to QPST\bin
9) Right click on QFIL.exe and click Run as Administrator
10) Select "Flat Build" in qfil
11) Click the "Browse" button and go to the other folder named "ROOT"
12) Click the drag drop menu with the text "Firehose Programmer" and change it to "All Files"
13) Select BCM6153_V1660_PreBoot_20_KN.bin
14) Now it should take you back to the main interface of qfil
15) Now click on "Load XML" button and select both rawprogram0.xml and patch0.xml in the "ROOT" folder
16) Make sure the top has the text "Qualcomm HS-USB QDLoader 9008
17) Then click Download and wait a couple of seconds until it finishes
18) Now disconnect your phone and hold power + vol up and wait until TWRP boots
19) DONE! You now have twrp and can now flash magisk for root! Be aware that supersu is not well supported on the phone and should not be used
